

Flash Link® PDF In-Transit Data Logger, Model 40420-40451

This single-use in-transit temperature logger is an ideal cold chain management solution for monitoring temperature sensitive products as they are transported through the supply chain. A built-in USB connector and on-board software make it convenient for global distribution, since special reading devices are not required and there is no need to purchase software for downloading trip data. It is particularly important to have these features when loggers accompany products to remote locations; it means that receivers will have quick and easy access to temperature reports as soon as a shipment arrives.

SPECIFICATION

The Flash Link PDF In-Transit Data Logger has on-board software that automatically downloads trip information as soon as the unit is plugged into a PC. Since it has a built-in USB connector, no cradles, reading devices or adapters are needed. A secure, encrypted PDF report is automatically saved on the local hard drive, making it convenient to email and archive reports for quality assurance, traceability, and GDP. Service is available to configure customized logging parameters, such as sample intervals and high/low alarm settings.

- Single-use temperature logger
- Large, easy to read LCD display
- No software required to download data
- Built-in USB connector, no special reading devices needed
- Automatically created secure PDF report and CSV file
- Patented Shadow Log™ feature guarantees data even if the shipper fails to start the logger
- Trip history statistics available on LCD
- High/low alarm indicators
- Service available to custom configure logging parameters
